

ALICE(ZIMENG) WANG

A Customer-Centric Full-Stack Developer

Email: alicewang0089@gmail.com

Phone number: 647-515-6998

LinkedIn: alicewangzm

GitHub: alicewangzm

SKILLS

Programming Languages	TypeScript, JavaScript, Python, Java, HTML, CSS, C++
Frameworks/Others	React, Spring Boot, Vitest, npm, Node.js, git, VS Code, Android Studio, Xcode, Postman
Soft Skills	Leadership, teamwork, communication, problem-solving, adaptability, time management

EDUCATION

University of Waterloo

Sept 2019 – April 2024

Bachelor of Computer Science, with Distinction

Relevant Courses: Object-Oriented Software Development, Data Structures, Operating Systems, Human-Computer Interaction

Wilfrid Laurier University

Sept 2019 – April 2024

Bachelor of Business Administration, Concentration in Finance, Minor in Economics

Relevant Courses: Financial Markets and Security Trading, High-Tech Marketing, Investment Management, Business Policy

WORK EXPERIENCES

Full-Stack Developer

Alethea Medical

Calgary, Alberta

Jan 2025 - May 2025

- Participated in **full product lifecycle** across sprints—defined requirements with PMs, implemented features, deployed to staging/production, and performed regression testing.
- Integrated **Stripe APIs** for premium subscriptions, including webhooks, billing UI, and customer portal; built email workflows for transactional and marketing events.
- Refactored UI with **React, TypeScript, and MUI** into modular components; built editing interfaces, expandable sections, and snackbar alerts; enabled hot-reload across platforms (Vite, Android, iOS), cutting mobile test cycles by 75%.
- Modeled and synced structured data between **Firebase** and **TypeSense**; extended **backend** schemas and resolved critical cross-system consistency issues.
- Implemented **testing** infrastructure using **Vitest**, covering unit, integration, and UI test layers. Used **Faker** and custom factories to simulate realistic backend data, delivered clean tests.

Software Developer

Replicant

San Francisco, California

Jan 2023 - Apr 2023

- Developed and published an internal NPM package written in **Node.js** and **TypeScript** to enable seamless purchasing and configuration of phone numbers by leveraging telephony provider **REST APIs**, successfully reduced 80% manual phone number configuration time
- Implemented a comprehensive testing suite by mocking HTTP requests using **Jest** framework, resulting in robust testing and secure compilation

PROJECTS

Banking Transaction

Oct 2024

- Created several **RESTful banking APIs** in **Java** using **Spring Boot**, enabling account creation, balance management, and secure fund transfers between accounts.
- Implemented a **three-layer architecture**, Controller-Service-Repository, with DTOs, dependency injection, and in-memory data storage for efficient data handling and maintainability.

Supplier Upload

July 2023

- Designed and developed a full stack web application using **React, Material UI, and TypeScript**, enabling users to upload supplier logo, name and address
- Integrated **Google Maps API** to provide auto-complete address functionality, enhancing user experience and efficiency
- Leveraged **Node.js, Express/CORS, and Firebase** to create a robust backend server and database, facilitating image and text storage and processing

AWARDS

- University of Waterloo Pasupalk CS Capstone Bronze Award for Startup Project-A Little Favour (\$1K per group)
- University of Waterloo International Student Entrance Scholarship (\$10K)
